

Improved Outer Shell!

NEARLY ME LITES®

BREAST FORMS

A new matte outer finish for the most natural looking and softest feeling breast forms from Nearly Me Technologies.

New matte finish!

The NEARLY ME LITES® line of breast forms has been redesigned with a softer and more resilient matte outer skin that feels more like natural tissue than ever before. This new supple film has a very matte appearance to mimic the look of natural tissue. Available in 6 unique styles to fit all types of surgeries and figure types, each form is made with super soft lightweight silicone gel that is 25% lighter in weight than standard silicone. These lighter weight forms are perfect for many women as they age and their body shape and natural breast matures over time. These forms were developed to offer a lighter weight alternative to the heavier standard weight forms while still matching the contours of the natural breast.

Benefits:

- Lighter in weight for women who have lost density in their natural breast yet still maintains the natural shape.
- Perfect weight when standard gel is too heavy and extra lightweight is too light.
- Softer, more comfortable than some other types of forms when skin sensitivity may be an issue.
- Mimics the look and feel of softer more mature breast tissue.
- Each form comes in a durable yet discreet travel case for convenient storage and protection.
- Available in beige and soft sable skin tones in 6 of the most popular and best fitting styles available on today's market.
 - **245 Full Oval** for greater projection on wider chest walls.
 - **265 Full Triangle** for full projection lower on the chest wall.
 - **385 Semi-Full Triangle** for after more moderate surgeries with a smoother chest wall.
 - **775 Tapered Oval** for more modified surgeries with a thin upper wing.
 - **785 Tapered Triangle** for a fuller more mature draping look.
 - **795 Butterfly** for a rounder look when less tissue has been removed.
